Qlik Dashboard Development & Life Cycle

OVERVIEW, UPGRADE AND ADVANCED NEW FEATURES

Agenda

- Introduction
- IHS Qlik® Environment Overview
- Dashboard Lifecycle Activities
- Accessing NPIRS Dashboards
- 2024 Qlik® Sense Overview and AI New Features
- 2024 Qlik® Feb. Release - Upgrade & Advanced New Features
- Q & A

Introduction

- The Indian Health Service's (IHS) national data repository, National Patient Information Reporting System (NPIRS), enables IHS the ability to produce reliable and timely reports in support of statutory, regulatory, and administrative obligations, including user population counts, workload reporting, accreditation, and GPRA performance measures.
- The NPIRS system also enables the consolidation and integration of electronic health record information to improve timelines, and frequency of verified and published IHS data related to patient registration and health care encounters.
- This system provides more accurate, timely, and a broader scope of information to clinical and administrative managers throughout the Indian health system.
- Provides the framework for a Business Intelligence environment that enables data discovery, mining, predictive analysis and trending of key performance indicators in support of patient care and patient care management.

BI/BA Solutions

Business Intelligence

Answers to Questions:

What happened?
Why?
When?
How many?

Includes:

Reporting (KPIs, metrics)
Dashboards
Scorecards
Ad-hoc Queries

Business Analytics

Answers the Questions:

Why did this happen?
Could/would it happen again?
What will happen if we make
a change?
What else does the data tell
us?

Includes:

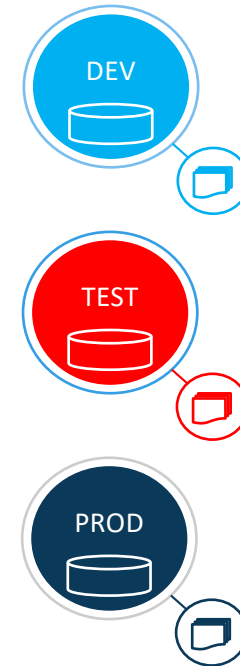

Data Mining
Predictive Modeling
Forecasting
Trend Analysis
Geospatial Analysis

IHS Qlik® Environment Overview

- The Qlik® Enterprise Environment is installed and maintained on DDMA Servers.
- Each environment contains Qlik® Sense, Qlik® View, Geo-Analytics and Qlik® Nprinting.
- Each environment has an independent data source connection that does not cross environment boundaries.

Qlik® Enterprise Environment

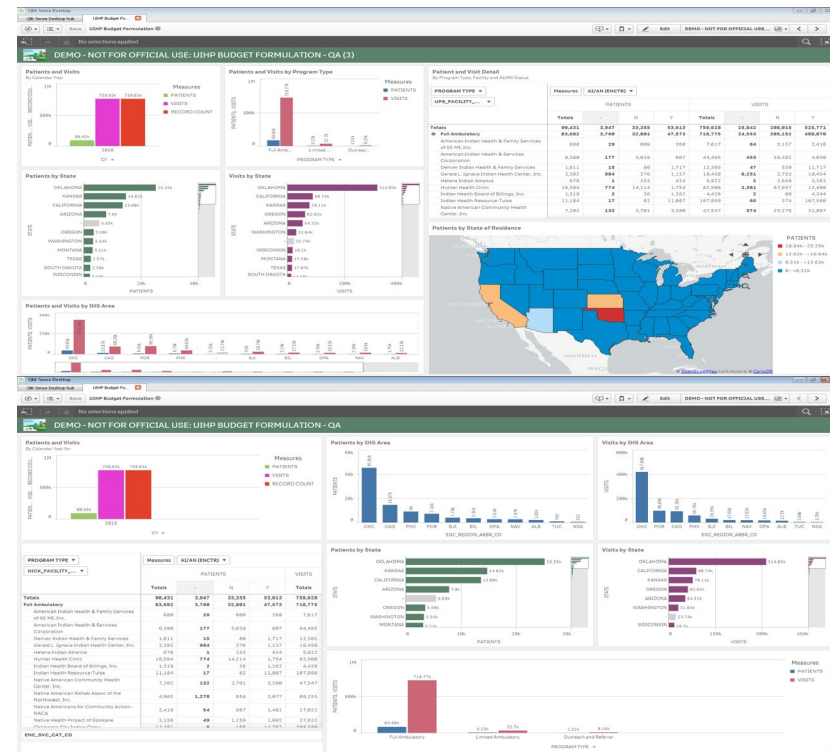

Dashboards

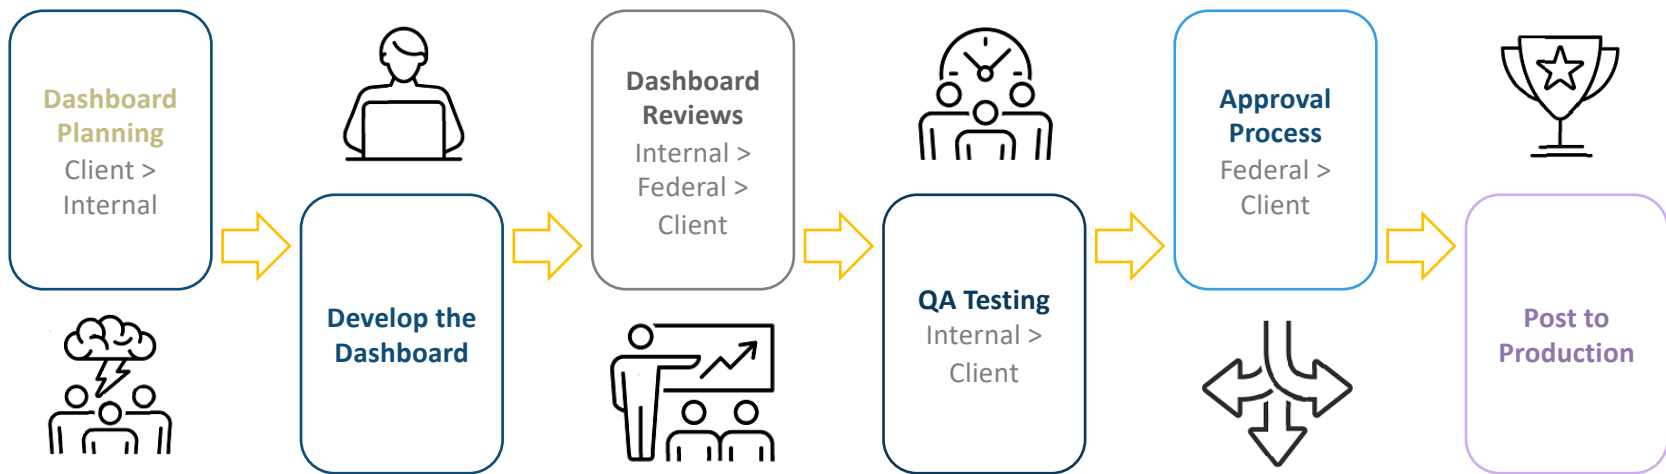

➤ A dashboard is a reporting solution, delivered by a Business Intelligence tool, that enables the integration and visualization of data to support decision making, trending, analysis and reporting.

➤ **3 'types' of dashboards**

- Operational Dashboards
- Strategic or Business Value Dashboard (BVD)
- Analytic Dashboards

Planning: Life Cycle Overview

Planning: Client Meeting Key Points

Client insights, feedback and answers

- DDMA will set up a project kickoff meeting with the client to determine these basics
 - Dashboard Objective
 - Data Sources
 - Visual Objects and Tables
 - Draft the Requirements Documentation

Planning: Client Feedback

Who is the audience?

- ❑ DDMA develops and maintains dashboards for a wide variety of clients/stakeholders for IHS that include:
 - IHS Users
 - IHS Headquarters, Offices/Divisions, Program & Area Offices
 - Tribal/Urban Users
 - Internal/External Partners

Planning: Security Considerations

Does the dashboard require Secure Access?

- The default level of security for all dashboards is the AD Group(s) that are connected to the dashboard stream
- Section Access can provide additional levels of security to better protect the dashboard data to users

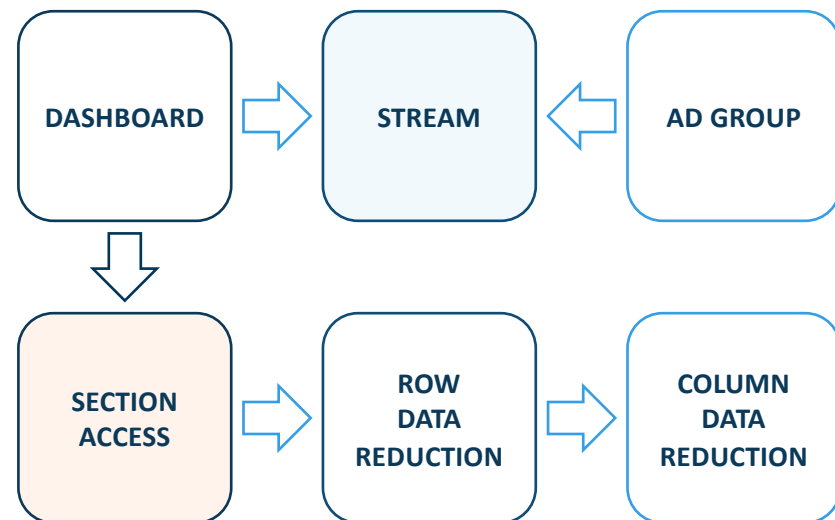

Planning: AD Group and Stream

Existing Stream and AD Group(s)

- If the dashboard is being developed for an existing client, the developer will require approval from the Federal Lead to connect to existing Streams or AD Groups.

New Stream and AD Group(s)

- If the new client dashboard is new to the environment, the developer will consult with Federal management for guidance on the following:

** Some abilities may require the developer to work with the Qlik® Sense Administrator.*

Dashboard Design

Best Practices and Guidelines

- NPIRS provides a dashboard template and best practice guidelines for developing and designing a dashboard.
- Apps/dashboards developed on DEV are migrated to TEST for QA and later to PROD via the NPIRS migration process guidelines.

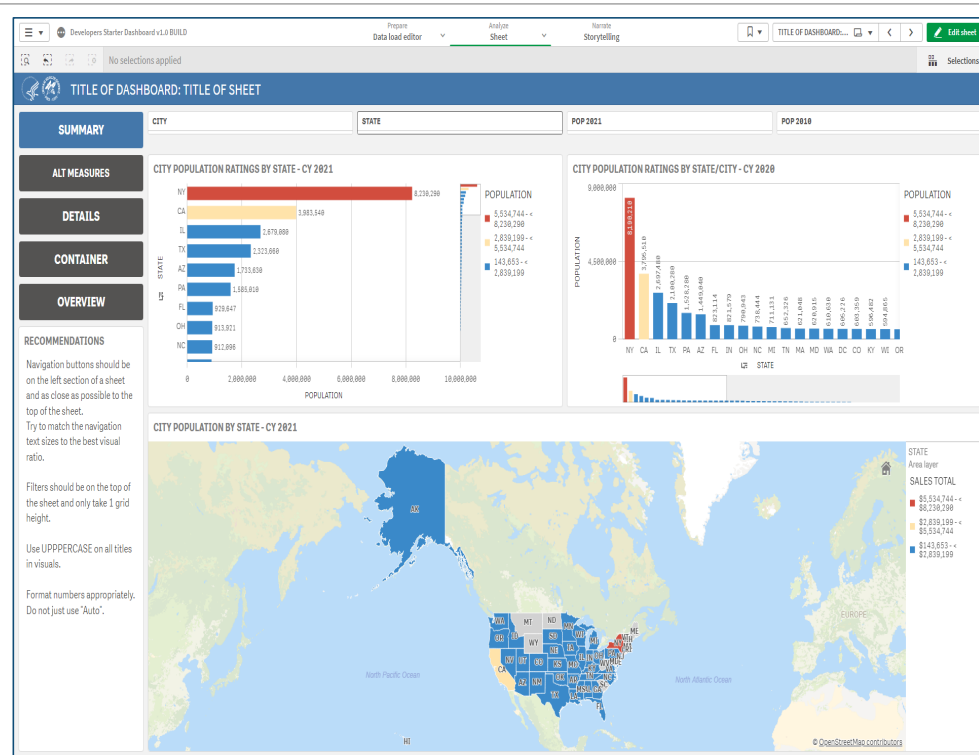

Designing: Developers Template

Developers Dashboard Template

➤ NPIRS has designed a developer's dashboard that can assist the build of a new dashboard with most of the main components already added, including:

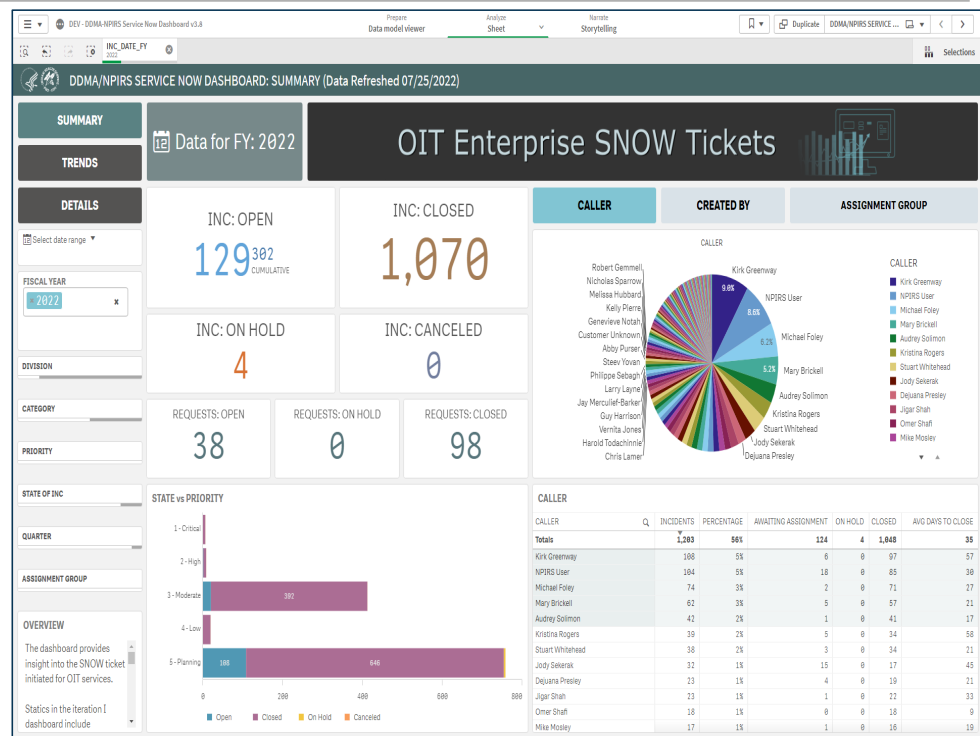

- Layout and Navigation
- Disclaimer Sheet
 - Scripting that supports the Disclaimer functionality
- General sample sheets
- Overview sheet

Designing: Summary Sheet

Summary Sheet

- As it may not be required, and depending on the client or Federal lead direction, a summary sheet can be very useful to brief the users of the most important data components at a glance.
- If unclear of what objects that should be on the summary sheet, always utilize the direction of the client or Federal lead for guidance.
- Developers should be mindful not to over populate dashboard sheets so that the sheet will display properly on 1366px resolution screens.

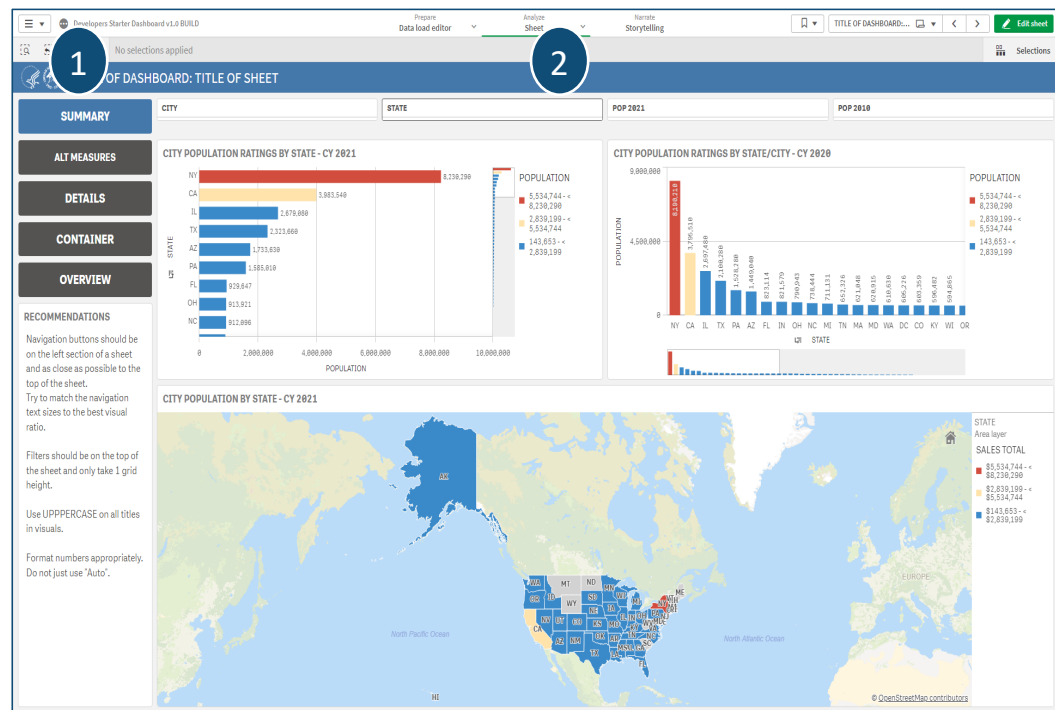

Designing: Navigation & Filters

Navigation (1)

- The Navigation creates the dashboard flow and visually allows the user to identify the sheets in the dashboard.

Filters (2)

- Filters allows ease of use for the users to sort data that best works for their objectives.

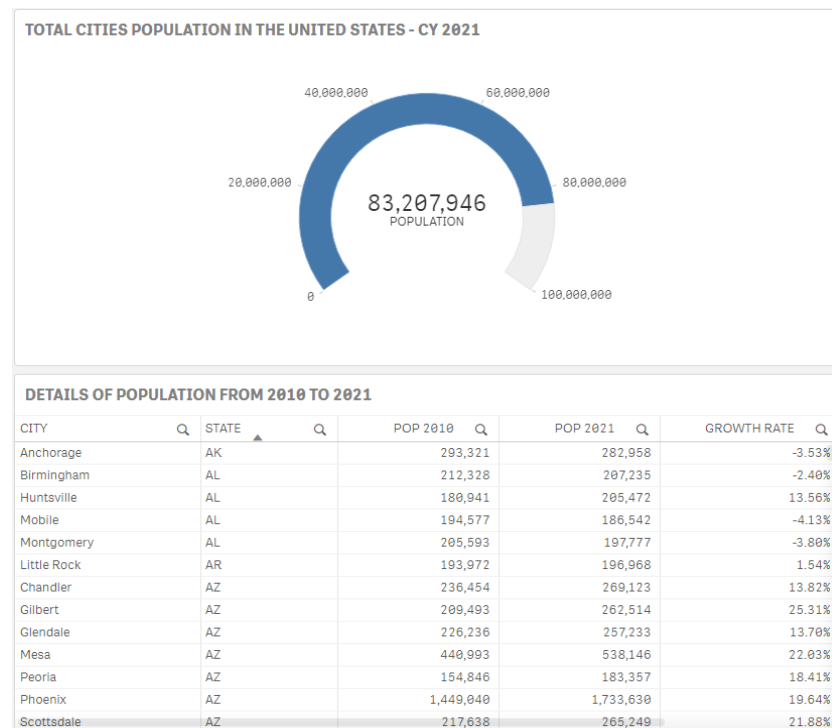

Designing: Titling & Labeling

Title Everything (if possible)

- Titling all objects, even if there is no title displayed, will allow object exports for Embedding, Story Telling building, Qlik® nPrinting report building and Application Support Dashboards to easily identify the objects. This will also assist the user when they are using Insight Advisor.

Labels that Make Sense

- Data dimension and measure labels should be manually entered and not allowed to default. This ensures the titling in the filter tracker (top right in dashboard) will correctly display it properly. This is especially required when using formulas in the label property.

Designing: Labeling

Labeling Objects for Clarity

- The label of an object will by default, repeat the dimension name or the measures expression.
- Labels should be manually updated to display a proper title of the dimension or measure.

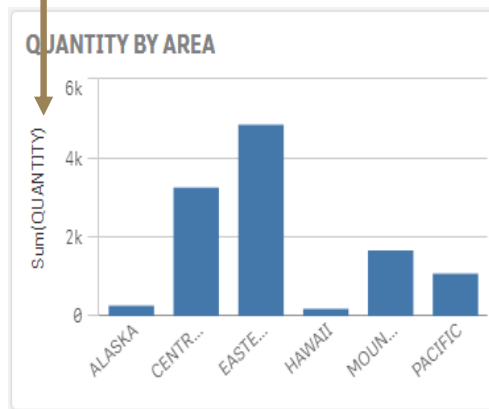

Expression

Sum(QUANTITY) *fx*

Modifier >

Label

Sum(QUANTITY) *fx*

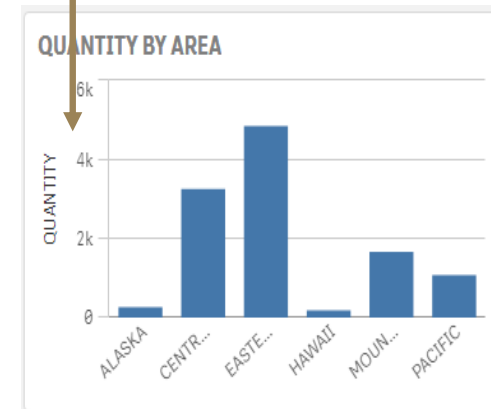

Expression

Sum(QUANTITY) *fx*

Modifier >

Label

QUANTITY *fx*

Designing: Overview Sheet

Overview Sheet (optional)

- An overview sheet allows the ability to offer detailed instructions for the users that may assist in understanding how to use the dashboard or the data.
- Overview sheets can contain sheet screenshots, demonstrative graphics and detailed text.
- Work with the client to see if an overview sheet is required.

The screenshot displays a Power BI dashboard interface. At the top, there's a navigation bar with options like 'Home', 'Data model viewer', 'Analyze Sheet', and 'Narrate Storytelling'. Below this, the dashboard title is 'TITLE OF DASHBOARD: TITLE OF SHEET'. On the left, a vertical navigation pane lists sections: SUMMARY, ALT MEASURES, DETAILS, CONTAINER, and OVERVIEW (which is currently selected). The main content area is titled 'OVERVIEW' and contains several sections:

- Navigation & Common Filters:** A text block explaining that all dashboards should have standard navigation on the left and a standard filter bar on each sheet.
- Visualizations:** Two bar charts and a map of the United States. The bar charts are annotated with callouts: 'USE THE STANDARD FILTER BAR TO FILTER DATA. THIS FILTER IS ACTIVE ACROSS ALL SHEETS' and 'USE THE LEFT NAVIGATION BUTTONS TO NAVIGATE SHEET TO SHEET'.
- Details Sheet and Exporting Data:** A text block stating 'The details sheet holds a base table of all data elements. This table has the ability to be exported as described in the following image.' Below this is a screenshot of a data table with a callout box containing a 4-step process for exporting data: 1. RIGHT-CLICK ANYWHERE ON THE HEADING AREA OF THE TABLE TO OPEN THE CONTEXT MENU; 2. SELECT THE 'DOWNLOAD AS...' OPTION; 3. SELECT THE 'CSV' OPTION; 4. WHEN THE DATA DOWNLOAD IS READY, THERE WILL BE A WINDOW DISPLAYED WITH THE LINK.

Deliverables: Landing Page

IHS Intranet A-Z Index

IHS Quality Reporting

Indian Health Services has developed an enterprise data analytics framework that ensures mission critical data is transformed into meaningful, insightful and useful information to support the mission of the agency of raising the physical, mental, social, and spiritual health of American Indians and Alaska Native (AI/AN) to the highest level. Quality of care is an agency priority, and IHS is committed to providing a high-performing health care delivery system for AI/AN people with data-driven analytics to advance mission outcomes.

IHS Performance Measure Reporting:

NAD-Q-AREAS vs NATIONAL REPORTS Dashboard	IQR/OQR QUALITY REPORTING Dashboard	WAIT TIME / PRIMARY CARE VISIT Dashboard	WAIT TIME / OP18 & OP22 Dashboard

IHS Intranet A-Z Index

IHS ORAP National Reporting

The Office of Resource Access and Partnerships (ORAP) serves as the lead office for the Business Office and Purchased Referred Care (formerly known as Contract Health Services) within the Indian Health Service (IHS). According to the current functional statement, ORAP is responsible for the following functions:

1. Provides Agency-wide leadership and consultation to the IHS direct operations and Tribal programs on IHS goals, objectives, policies, standards and priorities regarding the **operations and management** of the Business Office Services (BOS) and the Contract Health Services (CHS) programs.
2. Develops and implements **objectives, priorities, standards, measures and methodologies** for the BOS and CHS programs.
3. Manages and provides **leadership, advocacy, consultation and technical support** to Headquarters, IHS Areas and local levels on the full scope of BOS and CHS activities.
4. Represents the IHS at meetings and in discussions regarding **policy, legislation and other national issues**.
5. Provides **oversight and monitors** the BOS and CHS programs regarding compliance requirements, utilization reviews, revenue measures and reports.
6. Formulates and analyzes **BOS and CHS budgets** and prepares information for program budget presentations.
7. Collaborates and coordinates with IHS information technology staff and external organizations on **new technologies, applications and business practices**.
8. Develops resource opportunities and coordinates the BOS and CHS activities with other governmental and nongovernmental programs, **promoting optimum utilization** of all available health resources.
9. Participates in cross-cutting issues and processes including, but not limited to emergency preparedness/security, **budget formulation**, self-determination issues, and **resolution of audit findings** as may be needed and appropriate.

Deliverables: Internal Reviews

Internal Review with Contract Management and Peers

- When the dashboard development has been completed, it is highly recommended to get feedback from the contract management staff and peers.
- This helps identify any possible mistakes made or ambiguous data before presenting to the Federal management for their review.

Internal Review with Federal Management

- All dashboards must be approved by the Federal Managers prior to the client review.
- The Federal managers may suggest additional improvements for the dashboard.

Deliverables: Client Review

Introducing the Client to the New Dashboard

- After the dashboard has been approved by Federal Management, it is now time to migrate the dashboard to the TEST Enterprise Environment for client management review, feedback, and approvals.

Static Reporting: Qlik® Nprinting

When reports are completed and approved by the Federal manager and the client, then it must be reviewed by the IHS Privacy Act officer to give the final approval for delivery.

Qlik Nprinting® has the ability to automate the static report process and to be distributed to the end users via email.

START WITH A GOOD REPORT TITLE

Then a Good Opening Sub-Title

The main content section would have information about the main subjects of this report. It may continue to provide more information so the viewer receives a well understanding of all the data elements and what they represent.

The content section can also include bullet items to:

- Represent the data for effectively.
- Explain the story of the data.
- Offer suggestions or estimates of the data.
- Or any other details that are relevant.

TOTAL SALES
\$7,371.38

Including some text above a visual chart can be helpful to explain the following chart. The text may include details of the chart or maybe just summarized content that explains what the chart represents.

SALES (DRILL DOWN)

Charts & Visuals that Tell the Story

Not to overdo it, but sometimes a few extra charts or a map can tell a more detailed story of the report. All visuals in the report should have a useful relevance for the recipient so that the report is more effective to their needs.

ITEM QUANTITIES

Any data visual or table in the report will respond to reporting filters. What this means is when filters are not set, the report displays data in what is referred to as a national level. When filters are set, let's say for a specific region or location, then all the data elements (visuals and detailed tables) will only show data for the set filter.

SALES BY STATE

The Details are in the Details

A detailed table of all the raw data can be useful for some recipients that find this type of detailed data display more useful.

Quality Assurance (QA) Testing

Preliminary

- NPIRS will request from the client to provide a list of users to serve as testers. These users will need to be added to the assigned Qlik® Stream AD Group.
- If Section Access has already been implemented in the dashboard, then the section access process will need to be completed before testing.
- NPIRS will notify the client when testing is ready to start.

Client Testing Process

- Client users will test the dashboard and provide feedback to the client management staff.
- The client management staff will provide a list of corrections or adjustments that are needed for the dashboard.
- NPIRS staff will make the required adjustments to the dashboard and represent to the client.
- This process may need to be repeated until the client is able to approve the dashboard.

Final Stages

- After QA has completed and the client has approved for Production, NPIRS initiates the final stages.
- The Federal Manager will give the final approval to migrate the dashboard and landing page to the Production environment.
- After Production migration, NPIRS will test the dashboard to ensure it is working as expected and testing the landing page links.
- The Federal Manager will be notified the dashboard and landing page is ready for the client.
- The Federal Manager will send an email to the client notifying them their dashboard is published to Production and include the landing page link.

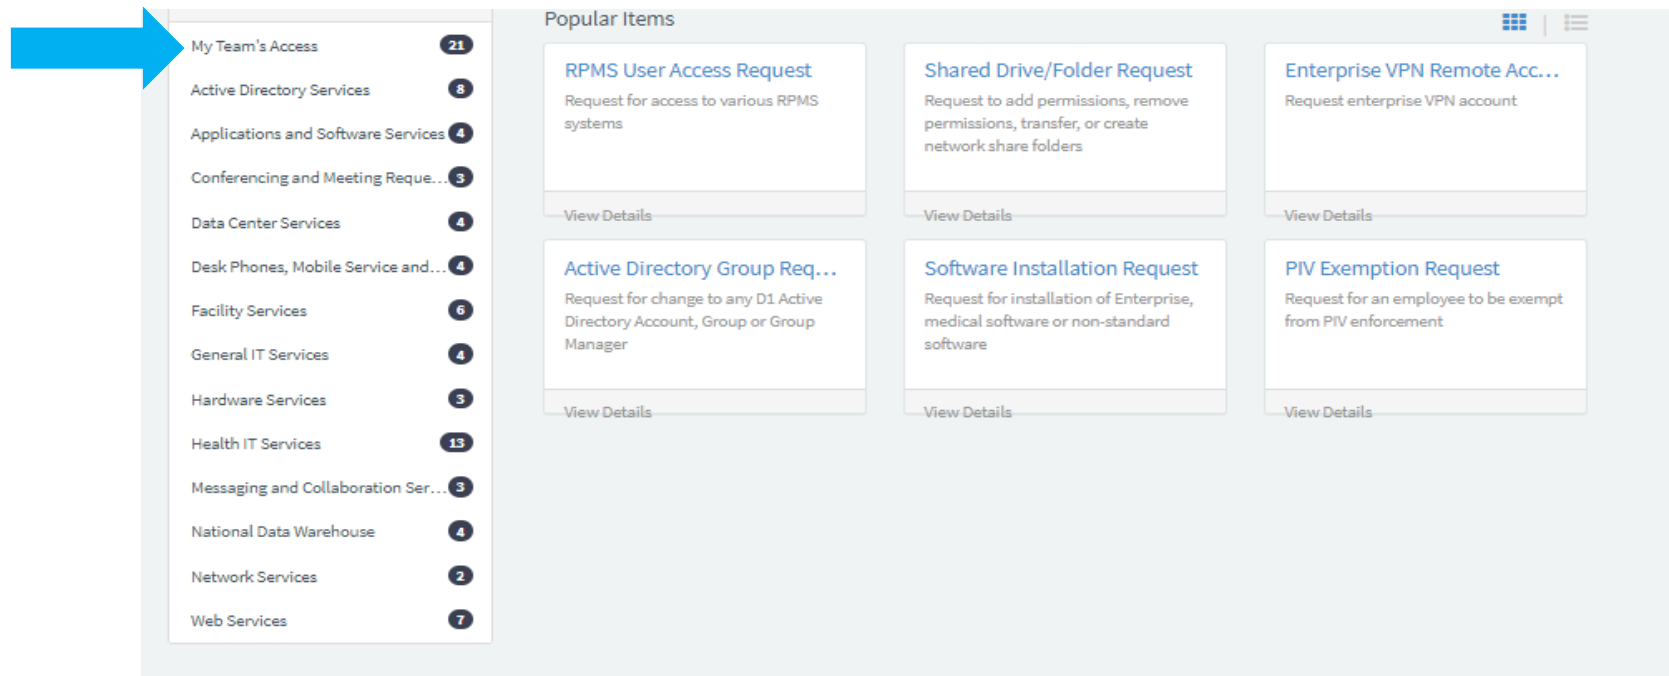

How to access Qlik® Dashboard

ACCESS PROCESS FOR PROD DASHBOARDS

- Requestor's Supervisor should submit a SailPoint request for access to a NPIRS PROD Dashboard.
- The Product Owner will approve the request.
- NPIRS receives the request
- Access is granted by adding the requestor to the PROD Dashboard appropriate AD Group.
- User(s) are notified of their access

2024 Qlik Sense Overview & AI new features

- Qlik Sense 2024 delivers a comprehensive suite of intuitive tools for seamless data exploration and visualization.
- Discover the powerful data analytics platform that empowers organizations to uncover impactful insights and make informed decisions.

Key features and enhancements

Upgraded Analytics Engine

Qlik Sense 2024 features a powerful, next-generation analytics engine that delivers lightning-fast performance and unparalleled scalability, ensuring seamless data processing and insights even with large, complex datasets.

Intelligent Visualizations

The platform's advanced data visualization capabilities enable users to create stunning, interactive charts and graphs that intuitively convey insights. Automated suggestions help identify the most relevant visualizations for the data.

Improved data visualization

Sophisticated Visualizations

Qlik Sense 2024 offers advanced data visualization capabilities, enabling users to create stunning, intuitive charts and graphs that bring insights to life.

Intuitive Exploration

The platform's streamlined user interface and automated visualization suggestions make it easy for users of all skill levels to uncover hidden patterns and trends.

Expanded Capabilities

Qlik Sense 2024 seamlessly integrates with leading data visualization tools, empowering users to leverage the full spectrum of analytical capabilities.

Advanced analytics and insights

Predictive Analytics

Qlik Sense 2024 leverages powerful AI algorithms to surface predictive insights, enabling users to forecast trends, identify risks, and make data-driven decisions.

Automated Anomaly Detection

The platform's advanced analytics engine automatically identifies anomalies and outliers in data.

Prescriptive Recommendations

Qlik Sense 2024 provides prescriptive recommendations based on its deep analysis, guiding users towards optimal strategies and empowering them.

Seamless Integration with Other Tools

Qlik Sense 2024 seamlessly integrates with a wide range of leading business intelligence, data visualization, and productivity tools.

Increased Scalability and Performance

Scalable Architecture

Qlik Sense 2024 features a highly scalable architecture that can seamlessly handle growing data volumes and user demands.

Distributed Computing

The platform's distributed computing capabilities leverage the power of multiple nodes, distributing the workload and enabling rapid data processing at scale.

Intelligent Resource Allocation

Advanced algorithms intelligently allocate system resources, prioritizing critical tasks and ensuring consistent, high-performance analytics and data exploration experiences.

Enhanced User Experience

Qlik Sense 2024 delivers an unparalleled user experience, seamlessly blending intuitive design, intelligent data exploration, and personalized insights.

Streamlined Data Preparation

Intelligent Data Extraction

Qlik Sense 2024 offers advanced capabilities to seamlessly extract, transform, and load data from a wide range of sources, streamlining the data preparation process.

Intuitive Data Modeling

The platform's user-friendly data modeling tools enable users to quickly and intuitively build robust data models, ensuring data integrity and optimized analytics.

Automated Workflows

Qlik Sense 2024 provides powerful automation features, allowing users to create and schedule data refreshes, transformations, and other repetitive tasks, saving time and effort.

Intuitive Data Visualization

Drag-and-Drop Interface

Qlik Sense's intuitive drag-and-drop interface allows users to easily create stunning visualizations without the need for complex coding or technical expertise.

Responsive Design

Qlik Sense's responsive design ensures that visualizations and dashboards look great on any device, from desktop computers to mobile devices.

Customizable Visualizations

Qlik Sense offers a wide range of visualization types, including charts, graphs, maps, and more.

Seamless Data Integration

1

Connect to Multiple Data Sources

Qlik Sense allows users to easily connect to a wide range of data sources, including databases, spreadsheets, and cloud-based applications.

2

Real-Time Data Updates

Qlik Sense's powerful data integration capabilities ensure that visualizations and dashboards are always up-to-date, with real-time data updates.

3

Data Preparation Tools

Qlik Sense includes a range of data preparation tools that make it easy to clean, transform, and combine data from multiple sources.

Collaborative Analytics

Shared Insights

Qlik Sense makes it easy for teams to share insights and collaborate on data analysis. Users can create and publish interactive dashboards, reports, and visualizations that can be accessed by colleagues and stakeholders.

Annotations and Comments

Qlik Sense allows users to add annotations and comments directly to visualizations, enabling teams to discuss and contextualize their findings in real-time.

Streamlined Workflows

Qlik Sense's collaborative features help to streamline workflows, making it easier for teams to work together, share insights, and make data-driven decisions.

Advanced Analytics and AI

1 Predictive Analytics

Qlik Sense's advanced analytics capabilities enable users to leverage powerful predictive modeling techniques, such as regression analysis and time series forecasting, to uncover hidden patterns and make more accurate predictions.

2 Augmented Intelligence

Qlik Sense's augmented intelligence features, including natural language processing and machine learning, help users to uncover insights and make more informed decisions by automating complex data analysis tasks.

3 Artificial Intelligence

Qlik Sense's AI-powered features, such as intelligent search and recommendation engines, provide users with personalized insights and suggestions, helping them to navigate and explore data more effectively.

Augmented Intelligence

Natural Language Processing

Qlik Sense's natural language processing capabilities allow users to ask questions in plain English and receive relevant, data-driven insights in response.

Smart Recommendations

Qlik Sense's intelligent recommendation engine provides users with personalized suggestions for visualizations, insights, and data connections.

Automated Insights

Qlik Sense's machine learning algorithms automatically identify and surface important insights, trends, and anomalies in the data.

Contextual Awareness

Qlik Sense's contextual awareness features understand the user's intent and the specific business context, providing relevant and tailored insights.

Scalable and Secure Platform

1

Scalability

Qlik Sense is designed to handle large and complex data sets, enabling businesses to scale their analytics capabilities as their data and user base grow.

2

Enterprise-Grade Security

Qlik Sense offers robust security features, including role-based access controls, data encryption, and user authentication.

3

Governance and Compliance

Qlik Sense's governance features help businesses to maintain control over their data and analytics processes.

IHS/Qlik Environment – Current Status

DEV & TEST ENVIRONMENTS:
FEBRUARY 2024 RELEASE

February 2024 Release: New Features

The overall user experience has been refined with a more intuitive interface, faster navigation, and improved responsiveness. These enhancements make it easier for users to interact with the platform and access the information they need quickly.

1. Development Enhancements
2. Data
3. Enterprise Environment

Development Enhancements

These functionalities are commonly used in SQL and with many ML data preparation use cases

- New Pivot Table
- Enhanced Scatter Plots
- Heatmap Improvements
- Grid Chart
- Customizable KPI Objects
- Enhanced Line Charts
- Map Visualizations
- Styling Grid, Funnel & Sankey charts

Development Enhancements

➤ **Layout container**

- In the Layout container, charts can be placed in a freeform manner with or without a snapping grid.
- Charts can overlap, be stacked, and controlled with show conditions.

➤ **Filter pane styling**

- General settings for title font styling, background, border and shadow.
- Chart specific styling for header and content font styling, color settings for selection state, background color and image.
- Improved dynamic filtering and highlighting features allow users to interactively filter data directly within visualizations.

➤ **Copy and paste style**

- A new menu choice for copying style settings from one chart to another.

➤ **Borders and shadows:**

- Charts inherit the border setting from the theme but the border width and color setting can now be overridden and customized per chart.
- Chart shadow is a new property on charts, providing a shadow contour around the chart, with options for size and color.
- Borders and shadows works very well in the Layout container where charts can overlap and be stacked.

Qlik Data

Data window functions in engine load script

- Customers can now perform complex calculations on their data tables in the Qlik load script to perform aggregation on different partitions without losing the granularity of their data.

Qlik EE

- Enhanced Data Loading Performance
- Security and Compliance Updates
- Export functionality added for audits
- Expanded Connectivity Options
