Technical Summary

WATER JET MASSAGE

DEFINITION

Tracing its roots through the pages of history, the concept of dry water massage is deeply intertwined with the ancient practice of hydrotherapy, a cherished tradition among civilizations of bygone eras. Throughout history, the therapeutic potential of water has captivated societies, establishing it as a foundational element in both ancient and contemporary spa services.

Given that the human body comprises 60% water, the symbiotic relationship between water and our bodies becomes evident. At its essence, dry water massage employs heated pressurized water skillfully directed through specialized membranes, offering a massage experience that competes with and complements conventional methods. As the water courses and pulsates beneath the body, it applies rhythmic pressure, resulting in a profoundly deep and penetrating massage. The warmth of the 100°F heated water further contributes to the relaxation of the body.

Enhancing this experience is an intuitive user interface, empowering individuals to customize their massage down to the smallest detail. Depending on preferences, the system can produce gentle, calming waves for relaxation or powerful jets targeting deep-seated muscular stress.

The driving force behind this innovation lies in a profound appreciation for the inherent properties of water. Its fluid nature allows it to conform to the body's contours, reaching areas untouched by traditional massages. By harnessing these natural attributes, the system can precisely target specific muscle groups and identify tension areas with remarkable accuracy.

BENEFITS

Pain and Tension relief

When muscles are massaged, there's an enhancement in blood flow and a breakdown of stubborn muscular knots or tightness. This dual action provides immediate relief from pain and tension and paves the way for faster healing of strained muscles and ligaments.

Recovery

Improved blood circulation ensures a more prosperous supply of essential oxygen and nutrients to muscle cells, thereby accelerating recovery and promoting overall muscle health.

Effective Shoulder Massage

The uniquely designed massage surface of the Wellsystem, ergonomically surrounds the shoulder and neck area with its wave shape, allowing the massage jet to move around the entire shoulder muscles. The effective and strong shoulder massage targets the shoulder muscle (musculus trapezius) which is an essential predictor of mental stress, and when hardened by a tense posture, causes pain and tension throughout the body.

Lymphatic Drainage:

The lymphatic system plays a pivotal role in maintaining our health and vitality, the vanguard of our immune response. The lymphatic system is an elaborate network of delicate vessels intertwined with specialized nodes, collectively working harmoniously to transport a transparent fluid known as lymph. It stands as a bulwark against infections, diligently removing excess fluids from tissues and facilitating the disposal of waste products. The core of Wellsystem's massage technique lies in its rhythmic pressure, creating a pulsating dance that mimics the natural flow of lymph. This rhythmic motion enhances the effectiveness of expelling toxins, strengthens our immune defenses, and diminishes tissue swelling, effectively addressing concerns related to water retention.

Customized Experience:

One of the standout features of the Wellsystem Dry Water Massage Unit is its unparalleled customization capabilities. Users can adjust the jet pressure, pinpoint specific areas of the body for targeted relief, and optimize the session's duration for maximum efficiency. This high level of personalization ensures that each massage session is tailored to individual needs, allowing for a more precise and effective therapeutic experience.

MULTI-SENSORY RELAXATION

At our core, humans are vessels of sensory perception. Every sensory organ, whether it's the eyes capturing light or the skin feeling touch, serves as a gateway not only to the external world but also to an internal realm of emotions, memories, and instincts. Integrating multiple sensory stimulations within a massage session amplifies the overall aura of relaxation, where each touch, scent, and sound contributes to a holistic experience.

RELAX WITH GREEN LIGHT

Enhacing relaxation and a sense of ease to combat stress.

ACTIVATE WITH BLUE LIGHT

Activating light stimulates the body & mind, and brightens the mood.

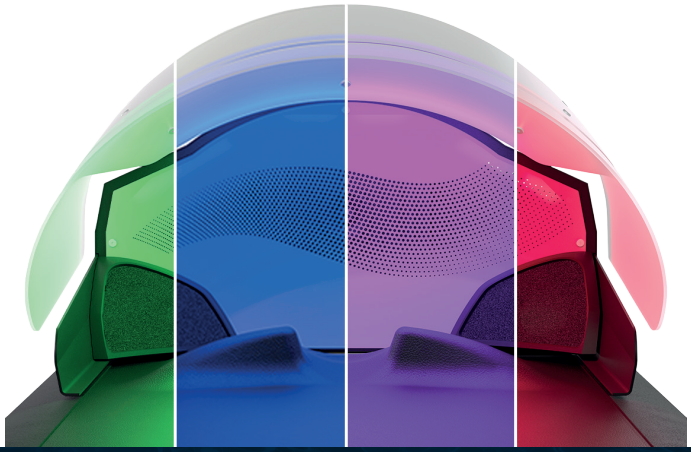

RECHARGE WITH RED LIGHT

Ideal for recharging and revitalizing the skin and body.

LIGHT

Colors are more than just visual delights; they're emotional storytellers. Blue boosts alertness, helps memory, brain function and elevates mood. While green, with its natural resonance, fosters balance and harmony. Weaving chromotherapy into the dry water massage narrative allows for a customized ambiance tailored to evoke desired emotional landscapes.

The Wellsystem also offers Red-Light (660 nm) and Infrared Light (850 nm). Emulating nature’s energy conversion process with light-absorbing cells, enhancing cellular processes, and promoting cell renewal for skin rejuvenation.

SOUND

Amid the cacophony of daily life, the gentle lullaby of soft music, the rhythmic pattern of rain, and so on serve as an anchor, grounding the mind, muting external distractions, and nurturing an environment conducive to profound relaxation. The high-quality sound system with integrated SD card and Bluetooth®, Connect complements the massage with relaxing music and meditative sounds.

The music is controlled via the large touch-screen display. If desired, the user ‘s smartphone can easily be connected via Bluetooth® and users can enjoy their favorite music, podcasts, or relaxation courses

AROMA

The sense of smell, often underestimated, holds a direct conduit to the limbic system, the brain's emotional epicenter. Introduce essential oils into this equation; the result is nothing short of magical. Lavender whispers promises of relaxation, chamomile envelopes the senses with peace, and eucalyptus rejuvenates with its invigorating essence. With aromatic scents, the massage becomes a completely immersive total-sensory experience. Choose from relaxation scents like Lavender or invigorating scents like Citrus or Eucalyptus to fully customize the experience for clients. The intensity of the fragrance can be individually adjusted, or the feature turned off based on client preferences.

POSITIVE IMPACT ON THE CENTRAL NERVOUS SYSTEM

The Central Nervous System is a vital and complex part of our biology. Think of the Central Nervous System as the main controller of the body's complex system. It is always active, whether it's feeling a breeze on our skin or moving our limbs. It processes sensory information, manages movement, and is responsible for many of our physiological and behavioral actions.

At the heart of the Central Nervous System lie two primary organs: the enigmatic brain, the seat of our thoughts, desires, and dreams, and the spinal cord, the pivotal channel that bridges the brain with the rest of the body.

Massage, in its various techniques, is more than just a physical treatment of the body; it has effects that impact the Central Nervous System.

Endorphin Release

With each knead and pressure application, these 'feel good' neurotransmitters are set free, playing an instrumental role in pain mitigation and mood upliftment.

Reducing Cortisol Levels

Stress is a common issue in today's life, and cortisol is its associated hormone. Various studies have shown that massage can effectively reduce cortisol levels. As a result, this leads to a noticeable decrease in stress and anxiety symptoms.

Enhanced Sensory Response

Under our skin, numerous nerve endings continuously send sensory information to the Central Nervous System. Massage stimulates these nerve endings, improving their response and providing better feedback to the Central Nervous System, which leads to increased sensitivity and awareness.

Dry water massage stands out among various massage techniques due to its unique approach. It uses consistent water pressure to stimulate endorphin release. Additionally, it integrates elements like aroma, visual effects from chromotherapy, and calming sounds. Together, these features create a balanced environment that can help regulate the Central Nervous System, especially when it's overactive.

wellsystem
WAVE

COMPETITIVE EDGE

STATE-OF-THE-ART AIRLESS TECHNOLOGY

The distinction between traditional air-infused and the Wellsystem's airless water jets makes a profound difference in terms of performance, therapeutic effect, and sensorial experience.

Pure Performance and Enhanced Precision

By utilizing a purely water-based medium for the massage jets, the Wellsystem ensures consistent pressure and more predictable response. This unvarying intensity can be particularly beneficial in addressing specific muscular issues or chronic tension. When water jets are mixed with air, there can be variability in the pressure and contact points during a massage session. In contrast, an airless system ensures that the water jets maintain their precision throughout, providing a more targeted and efficient therapeutic effect.

Optimal Force Distribution

The purity of the airless water jets translates to a massage experience that distributes force evenly. This means that every part of the body in contact with the jets receives consistent attention, maximizing the therapeutic benefits and ensuring no area is neglected.

Quiet Experience

The absence of air ensures a quiet operation and relaxing experience.

Reduced Maintenance and Longevity

Delivering an airless experience, the Wellsystem reduces short and long-term maintenance needs, offering a more durable and reliable solution.

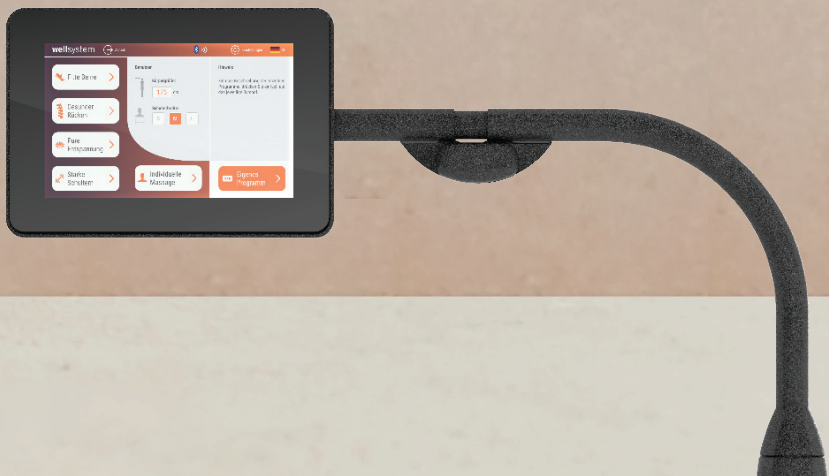

LARGE TOUCH SCREEN DISPLAY

ENDLESS OPPORTUNITIES

Experience boundless possibilities with the easy-to-use, swivel touchscreen that provides you and your customers with limitless potential. Users can begin by adjusting settings for a fully customized and relaxing session. All settings can be modified effortlessly and intuitively during the massage.

Tailor your experience by selecting between upper body or total body options and adjust massage pressure settings from gentle kneading to a powerful deep tissue experience.

Thanks to **NFC Connect,** you can save your preferred settings and preferences for seamless access in the next session.

SUMMARY OF BENEFITS

Pure Relaxation

Full body massage and sensorial immersion

Pain and Tension relief

Mitigate muscle tension and foster relaxation

Recovery

Enhance blood circulation

Expel toxins and fortify our immune defenses

Ergonomic Excellence

Adapting to the unique contours of every body type

Mental well-being

Positive impact on the Central Nervous System

Multi-Sensory Symphony

Total Relaxation for Body, Mind & Soul

Customizable Experience

User-friendly Interface

APPLICATIONS

The modern era has witnessed a surge in the wellness market, driven by an informed and proactive approach to health and well-being. People around the globe are actively seeking avenues to enhance their physical, mental, and emotional health.
In responding to these rapidly evolving consumer expectations, businesses are consistently seeking innovations and cutting-edge, scientifically-backed solutions centered around user needs and preferences.
The Wellsystem Dry Water Massage Unit isn't just a product; it's a paradigm shift. Its unique fusion of advanced technology with deep-rooted therapeutic practices positions it as an indispensable asset across diverse sectors.
For businesses, it's not just an addition; it's an elevation, propelling them to the forefront of innovative wellness and recovery.

Wellness & Spa

The contemporary spa, a haven of relaxation and rejuvenation, has always been a melting pot of time-honored therapies and innovative treatments. Yet, within this dynamic landscape, the introduction of the Wellsystem Dry Water Massage Unit is akin to the unveiling of a masterpiece.

Offers a perfect combination with traditional services: not intended to compete with traditional spa services, the Wellsystem has been designed to complement them and offer an opportunity for your client to extend their wellness journey. It unleashes its full potential when combined with a traditional massage as the water element prepares and unravels body and mind.

Injects a fresh essence into your menu: presents your clients with an opportunity to enter the future to indulge in a massage experience that is consistent in its delivery and swathed in multi-sensory delights.

For those who might have reservations about traditional massages: concerns of privacy, physical touch, or simply the quest for novelty, the Wellsystem emerges as a beacon, offering an experience that's both intimate and innovative.

Solution provider: difficulties in finding massage therapists have been a challenge shared among many of us. The Wellsystem offers an alternative and a safety net in this evolving paradigm.

Accessible: designed to be ergonomic and autonomous, it is very easy to adopt and use. Staff and client onboarding becomes a straightforward affair through the intuitive interface.

Easy and low operating cost: theoretically maintenance-free, it is also hygienic and easy to clean and sanitize.

Fitness & Recovery

In the pulsating world of fitness, where every heartbeat and every drop of sweat is a testament to perseverance and passion, the aftermath of intense workouts often manifests as muscle soreness, fatigue, and occasional strains. It's in this post-workout window, where the body is recuperating and rebuilding that the Wellsystem Dry Water Massage Unit shines as an invaluable ally.

The Crucial Phase of Post-Workout Recovery:
An intense workout, whether a spirited spin class or a rigorous weight training session, is a symphony of muscle contractions and expansions, accompanying muscle soreness and tightness. The Wellsystem, by aiding in muscle relaxation, it ensures that the post-workout phase is as optimized as the workout itself. Fatigue gives way to rejuvenation, tightness to suppleness, and soreness to comfort. As members lie down on the Wellsystem, they're not just getting a massage; they're accelerating their recovery, ensuring that they're primed and ready for their next fitness challenge.

Elevate Your Wellness & Recovery Zone:
Today's fitness landscape is not just about offering the latest equipment or the trendiest workout regimes; it's about holistic well-being. Integrating the Wellsystem Unit into a fitness center's offerings is akin to providing a premium service. For potential new members, it's an enticing lure, a promise of comprehensive care that goes beyond mere workouts. For existing members, it's an affirmation of the center's commitment to their overall well-being, solidifying their loyalty.

Accessible:
Designed to be ergonomic and autonomous, it is very easy to adopt and use. Staff and client onboarding becomes a straightforward affair through the intuitive interface.

Easy and low operating cost:
Theoretically maintenance-free, it is also hygienic and easy to clean and sanitize.

OPERATIONS & MAINTENANCE

Useful Maintenance Tips

How to find the serial number on the Wellsystem

The serial number of this equipment can be found towards the foot of the Wellsystem bed.

MARKETING RESOURCES + SOCIAL MEDIA

DIGITAL MEDIA & MARKETING KIT:

Included with before purchase, you will receive from your sales representative a comprehensive collection of images, social media content, sales cards, visual merchandising, promotional posters, counter displays, operational posters, quick-start guides, and videos.

For more information on how to use the kit's resources, please see our guides included in the kit or contact marketing@jkamerica.com for assistance.

Wave Touch Spa_Complete

FREQUENTLY ASKED QUESTIONS

Hydrotherapy Massage is a convenient, dry, full-body massage with the use of pressurized water.

Feel your stress slip away in only 15 minutes.

How long is an optimal service?

You can program a massage on the Wellsystem from 5 minutes to 60 minutes. We recommend a minimum service time of 15 minutes. From a business approach, we advise setting your service for a 25 or 50 minutes session.

What is the maximum weight limit?

The Wellsystem Wave has been tested up to 460 pounds.

Can I get undressed for my massage session?

The typical session is recommended to be fully dressed with light clothes, but you can wear whatever makes you feel most comfortable.

What products can I use to clean and sanitize the unit?

You can use most detergent and disinfectant available. JK Products and Services recommend Lucasol and Virox products for sanitation. It not recommendeds to use a microfiber cloth or paper towels to clean the touch screen.

Some clients have reported being cold during a session, what can I offer?

If your client reports being cold during a session, the first thing to do is to verify the water temperature on the touchscreen settings. If the actual temperature is lower than the set temperature, you can start a session or increase it.
Regardless, some clients are more sensitive to temperature. We recommend offering a blanket to position on top of the client for more comfort.

The fan on my Wellsystem is activating, what does this mean?

Congratulations, this means your service is popular. The Wellsystem warms up the water for guest comfort and massage efficacy. However, in case of heavy usage, the unit needs to cool down and is equipped with an internal device to do so. The fan indicates the unit is cooling down.

Are there any precautions to consider when using Hydrotherapy Massage?

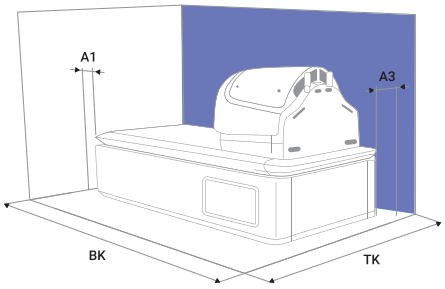

You can refer to the user manual or your JK Sales Representative for more information. Please consult with your health provider should you have any questions or concerns about using the Wellsystem Wave Touch.

TECHNICAL
SUMMARY

TECHNICAL INFORMATION

Power consumption rating	3,000 W
Rated frequency	60 Hz
Rated voltage	230 V
Rated breakers	20 amp 2-pole only
Rated amp draw 1 Ø	14
Mains Power Connection	The unit is configured from the factory for connection to single phase power only. A 3/4" liquid-tight connector is provided.
Noise level 1m away from device	55 dB
Noise level inside the device	<56 dB
Load on the rubber bladder	max. 463 lbs // 210 kg
Weight empty	approx. 370 lbs
Weight full	approx. 1041lb
Unit footprint**	96 7/16" X 74 13/16"

A1 - Minimun recommended distance to the wall l 6 inches
A3 - Minimun recommended distance to the wall l 12 inches
TK - Minimun recommended room width l 75 inches or 6.2 feet
BK - Minimun recommended room lengthl 96 inches or 8 feet

You must ensure efficient room ventilation to avoid unit overheating.

The exhaust vent is located on the right side of the unit. This side, is in-facing the wall with the minimum recommended distance to the wall

Electrical power (ship for hardwire connection) must come from the blue area (right side or back of the spa-hood) or underneath the unit.
