

SESSION

GM Driving Technology: Advanced Technologies in ADAS and the Impact to the Repair Industry.

DESCRIPTION

GM representatives and engineers supporting the collision repair industry will provide an overview of how ADAS and other advanced technologies are impacting the industry and what repairers may want to consider as the Battery Electric Vehicles (BEV) car parc grows in the coming years. Topics that will be addressed and discussed include:

- ADAS scanning and calibrations. Can your business do them? Do you have the right tools?
- Collision Repair. What do you need to know? What differences are there between ICE and BEV that repairers need to know?
- The GM Collision Repair Network. What are the newest changes that you need to know for your consideration to join?
- “NEW!” Collision Inspection Process. Learn how GM is helping navigating the repair process so repairers can confidently and safely return vehicles back to customers.
