

SESSION

Steer by Wire – INFINITI's Direct Adaptive Steering (D.A.S.)

DESCRIPTION

A World's First Technology, INFINITI's Direct Adaptive Steering® (D.A.S.), removes the mechanical connection between the steering wheel and tires, allowing for instantaneous driver input that can be digitally processed and adjusted up to 1,000 times per second.

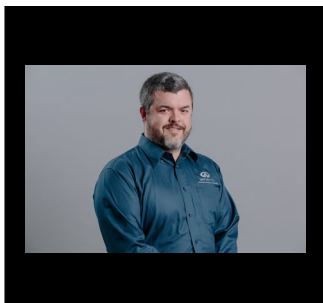

The D.A.S. is unaffected by the kickback and forced movement of conventional steering but still gradually requires more effort with increased speed and G-forces like a conventional system.

This class will include the following:

- D.A.S. operation theory
- D.A.S. component overview
- D.A.S. service procedures
- Q&A opportunity
