PATIENTS FOR PATIENT SAFETY US

Annual Report 2021 / 2022

Implementation of the
World Health Organization (WHO)
Global Patient Safety Action Plan
in the United States

December 2022

Taking Action Restoring trust:

What Patients, Families and Communities Expect

Radical collaboration with diverse patients, family members and communities in the design of patient safety initiatives

Learn from patients and families by providing systems to which they can report harm from unsafe care. Use PROs and safety surveys

Universal truth telling and transparency

Caregivers are provided resources, training and support

Reliable, understandable patient information and access to medical records

Leadership accountable for measurably reducing inequitable care and harm from unsafe care.

“It’s a question of will”
