

## 2023 IHS – OIT & ORAP Conference Indian Health Service (IHS) Authority To Operate (ATO) Risk and Compliance (R&C) Security Assessment and Authorization (SA&A)

Process

Presented by	Sam Tharakan Mathew
Title	R&C Federal Team Lead
Phone	(301) 526-8489
Email	Sam.Mathew@ihs.gov
Team Email	IHSDISRiskAndCompliance@ihs.gov
Target Date	24 August 2023
Target Start Time	10 :00 AM EST

Indian Health Service (IHS) / Office of Information Technology (OIT) / Division of Information Security (DIS)

# DYK? – Atlanta, Georgia!

What is Atlanta, Georgia famous for, besides being home to the Coca-Cola headquarters and the busiest airport in America (and the world!)?

- Before 1836, the Creek and Cherokee Native American people were the original inhabitants of the Atlanta area.
- Atlanta is the **38th** largest city in the United States, with some common nicknames for Atlanta are City in a Forest, Dogwood City, and Empire City of the South.
- The Atlanta flag features the state's coat of arms in gold on a blue background. The emblem has a phoenix rising from flames and the dates the city was incorporated (1847) and the end end of the Civil War (1865). Atlanta was the only city in North America destroyed as an act of war, and its symbol is a phoenix.
- The Georgia Aquarium in Atlanta was the largest in the world when it was first built in 2005 and remains the country's largest (and word's third largest) today.
- Atlanta has 5 major professional sports teams: Atlanta Falcons (NFL), Atlanta Hawks (NBA), Atlanta Braves (MLB), Atlanta Dream (WNBA) and Atlanta United (MLS).
- Atlanta has the second-most shopping centers in the U.S.
- There are over 55 streets with the name Peachtree in Atlanta.
- ...etc

# World's Most Valuable Commodity

- **D.A.T.A.** is now becoming the most valuable commodity on earth, surpassing fossil fuels like oil.
- The BIG TECH giants that deal in data, such as Google, Amazon, Facebook, Apple, Microsoft and Tesla, are becoming increasingly powerful.
  - <u>DYK</u>? An individual's Facebook data may be worth over \$100, and one individual recently sold his data for \$2,733 on Kickstarter.

# The world's most valuable resource is no longer oil, but data

Regulating the internet giants

The data economy demands a new approach to antitrust rules

# **OIT-DIS Risk & Compliance Team**

The Risk and Compliance (R&C) Team D2D Roles & Responsibilities:

- ✓ Aligns to the IHS-DIS objectives while managing the cyber risks, in order to achieve the regulatory needs (FISMA/HIPAA/GAO/A-123/OIG/BOD/HHS = 7+).
- Improves the security of IHS data by identifying gaps, categorizing and documenting security risks that have the potential to impact IHS's ability to satisfy its mission, vision, goals and priorities.
- Establishes governance, formality, ownership, and accountability by developing, conducting and updating security assessments for IHS-HQ and other related national systems.

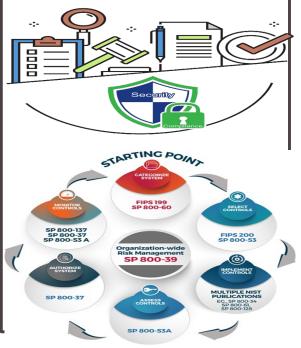

### Who's your PoC at the Risk & Compliance Team?

#### Sam Tharakan Mathew | MS, PMP, CISM, CISA, CASP+, CEH

Sam comes with a broad and diverse background in IT-OT engineering. He has attained his masters degree with multiple industry certifications in both IT-OT and project management. Over 15 years, Sam has significantly contributed as a key senior management consultant to the IT-OT cybersecurity programs at various private sectors and Federal Nuclear Energy facilities. Sam was also a member of the LexisNexis management team, where he established the LN-RT organization's first global GRC & Audit Department, which was responsible for overseeing and assisting the Federal USPTO's ATO mission, amongst other commercially globalized healthcare, intellectual property and financial compliance frameworks.

Confidentiality

The Information Security Triad

Confidentiality/ Integrity/ Availability (CIA) is a **benchmark model** that governs how the IHS protects it's information systems and data.

- Confidentiality prevents privacy information from unauthorized access attempts.
- Integrity maintains the consistency, accuracy and trustworthiness of data over its entire lifecycle of service delivery
- Availability refers to the readiness of data that is required to deliver service.

**<u>NOTE</u>**: Consider an online banking account as an example.

It is critical that the user's information is secret (**confidentiality**), accurate (**integrity**) and accessible (**availability**) at all times.

Availability

# IHS' Mission/Vision/Goals?

HEALTH CHANNE	View       Related Information         et       The Indian Health Service, an agency within the Department of Health and Human Services, is responsible for providing federal health services to American Indians and Alaska Natives. The provision of health services to members of federally-recognized tribes grew out of the special government-to-government relationship between the federal government and Indian tribes. This relationship, established in 1787, is based on Article I, Section 8 of the Constitution, and has been given form and substance by numerous treaties, laws, Supreme Court decisions, and Executive Orders. The IHS is the principal federal health care provider and health advocate for Indian people, and its goal is to raise their health status to the highest possible level. The IHS provides a comprehensive health service delivery system for American Indians and Alaska Natives.         Manual       Our Mission: to raise the physical, mental, social, and spiritual health of American Indians and Alaska Natives to the highest level         Our Vision: healthy communities and quality health care systems through strong partnerships and culturally responsive practices         Strategic goals:

## Risk Management Framework (RMF)

NIST SP 800-37, Risk Management Framework for Information Systems and Organizations: A System Life Cycle Approach for Security and Privacy

The National Institute of Standards and Technology (NIST) Risk Management Framework (RMF) 800-37, provides guidelines that help businesses and government agencies comply with Federal Information Processing Standards (FIPS) requirements for information systems and data and NIST Special Publication 800-39 requirements.

#### SP 800-18 SP 800-60 / CUI Registru aist Management Framework Steport 41PS 200 | SP 800-53 5P 800.37, 150 System Monitor Select Controls SP 800-160 Controls SP 800-30 Prepare Authorize Implement sp 800.5 Controls System Assess Controls SP 800-53P SP 800-39

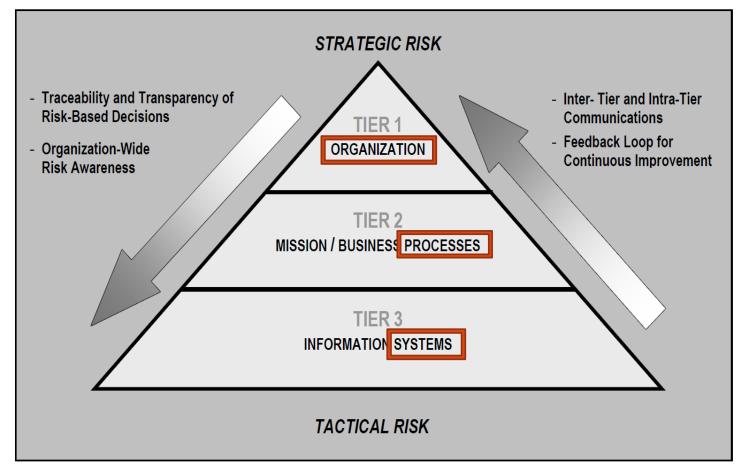

## 3-TIER RISK MANAGEMENT

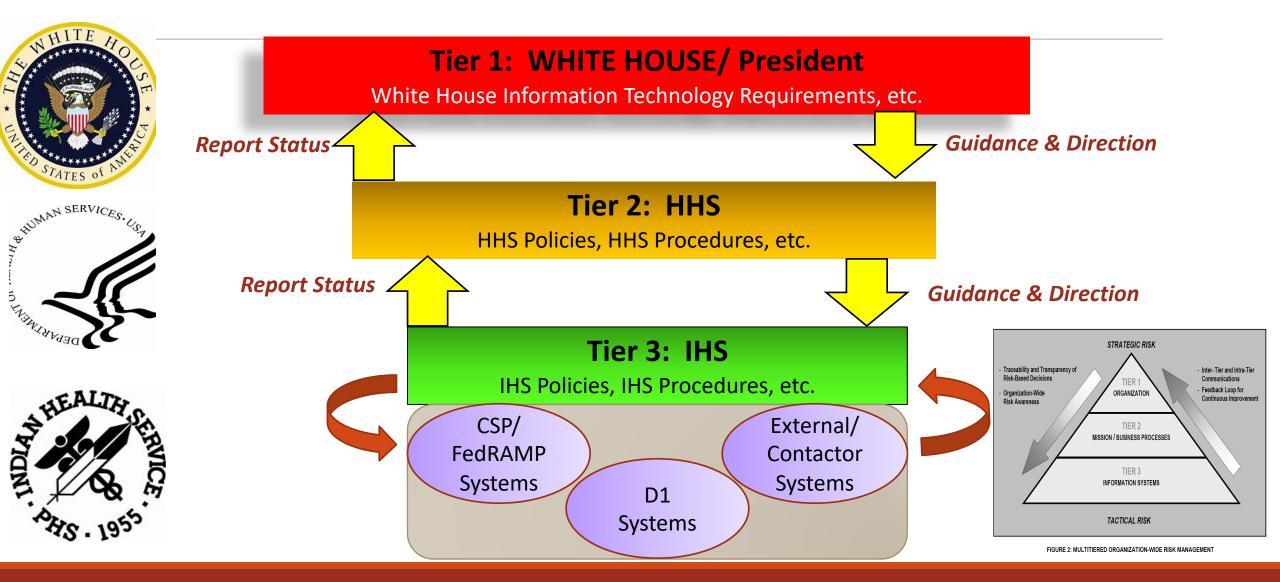

NIST SP 800-39, Chapter 2, Section 2.2, Managing Information Security Risk: Organization, Mission, and Information System View

#### FIGURE 2: MULTITIERED ORGANIZATION-WIDE RISK MANAGEMENT

- Tier-1 provides a prioritization of missions/business functions which in turn drives investment and funding by strategic and tactical *decisions*.
- Thus, Tier-1, affects the development of enterprise/ InfoSec architecture at Tier-2
- Allocations and deployment of management, operational, and technical security controls at Tier-3

A properly authorized system provides IHS the following benefits:

- Adheres to federal security compliance guidelines: System states – Risk Awareness/ Avoidance/ Acceptance/ Transfer, (Vendor, Cloud, FedRAMP)
- Helps IHS define and maintain its asset inventory.
- Aligns with the IHS's mission, vision and strategic goals.
- Facilitates the appropriate level of system protection.

## Obtaining System Authorization

To obtain an IHS system authorization, perform the following tasks:

- Work with the Division of Information Security's ISSOs!
- Ensure that the System Owner/Division Director has:
  - Officially registered the system in the RSA Archer Governance, Risk, And Compliance (GRC) system
  - Provided an HHS-IHS Universal Unique Identifier.
- Integrate information security in the system design and development.
- Complete and assemble required system documentation: start 8 months prior to assessment start date.
- Conduct an initial full-scope assessment 3 months prior to deploying the system in a production environment.
- Continue to work with the Division of Information Security's ISSOs, R&C team to complete a System Assessment Report (SAR) and submit it to the AO/CIO to request an ATO.

# NIST-800-37/ Risk Management Framework

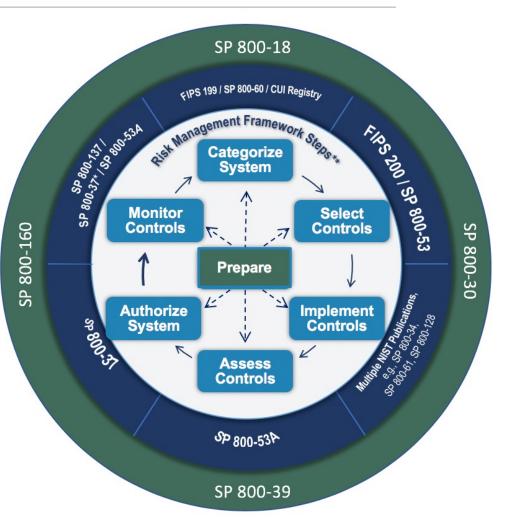

The National Institute of Standards and Technology (NIST) Risk Management Framework (RMF) 800-37, provides guidelines that help businesses and government agencies comply with Federal Information Processing Standards (FIPS) requirements for information systems and data and NIST Special Publication 800-39 requirements.

### The NIST RMF consists of the following 6-Prep Steps:

- Step 1: <u>Categorize</u> Information Systems
- Step 2: <u>Select</u> Security Controls

N SERVICE.

- Step 3: Implement Security Controls
- STEP 4: <u>ASSESS</u> SECURITY CONTROLS
- Step 5: Authorize Information System
- Step 6: <u>Monitor</u> Security Controls

# R&C Team' Playbc

- It is the System' Security Assessment Plan (SAP)
- The CSA/ R&C Assessment Team is on hand to ca evaluation that complies with NIST-RMF, by utiliz methods described in NIST publications.
- In order to execute the SA&A process efficiently core references are utilized by R&C.
  - NIST-SP-800-53A, Assessing Security and Privacy Controls in Federal Information Systems
  - NIST-SP-800-115, Technical Guide to Information Security Testing and Assessment
  - NIST-SP-800-137A, Assessing InfoSec Continuous Monitoring (ISCM) Programs
- The <u>primary</u> source of "<u>my</u>" verification and valid following:
  - Big-4-Plans: System' SSP [PL-2] + IRP [IR-8], CMP [CM-9], ISCP
  - System boundary Inventory [CM-8], against the scan results [F
  - IHS-DIS IS2P Baseline (OpDiv) Rev5 Handbook/ SOP
  - 3-Tier Common Controls, Policies and Procedures

Dissemination is permitted to the extent that it would further the execution of a lawful or official purpose. •

# NIST 800-12

## An Introduction to Information Security

•	In accordance with <b>Section 5</b> of the National Institute of Standards and Technology (NIST) Special Publication (SP) <b>800-12</b> , Revision 1, structuring policies and procedures should be as follows:	5 Information Security Policy
•	<ul> <li>Program Policy – is used to create an organization's information security program. Program policies set the strategic direction for security and assign resources for its implementation within the organization.</li> <li>These policies will be approved and issued by the CISO to establish or restructure the Information Security Program.</li> <li>Examples of these policies would be high level like access control, risk management and media sanitizing.</li> <li>All IHS systems would follow these same policies and use them in their respective certification packages.</li> </ul>	5.1 Standards, Guidelines, and Procedures       26         5.2 Program Policy       27         5.2.1 Basic Components of Program Policy       27         5.3 Issue-Specific Policy       28
•	<ul> <li>Issue Specific Policy – There are many areas for which issue-specific policy may be appropriate.</li> <li>New technologies and the discovery of new threats often require the creation of an issue-specific policy.</li> <li>Examples of issue specific policies are email privacy, social media, Bring Your Own Device (BYOD), etc.</li> <li>These policies will also be approved and issued by the CISO as they affect IHS as a whole.</li> </ul>	5.3.1 Example Topics for Issue-Specific Policy
•	<ul> <li>System Policy – While program and issue-specific policies are broad, high-level policies written to encompass ALL, system-specific policies provide information and direction on what actions are permitted on a particular system.</li> <li>System policies dictate exactly how a system or component of the system will be securely configured.</li> <li>Note, that one system specific policy could cover multiple systems, for example, a DISA-STIGs could be mandated for all systems, and specific STIGs or benchmark could be issued for specific system components (Windows, Linux, etc.).</li> <li>System policies should be crafted by the more technical personnel and may not be formally approved by CISO.</li> </ul>	5.4.1       Security Objectives       31         5.4.2       Operational Security Rules       31         5.4.3       System-Specific Policy Implementation       32         5.5       Interdependencies       32         5.6       Cost Considerations       33

DIS-PSA Team Function – Before any policy goes to the CISO, the PSA Team will vet the policy against industry standard and best security ۰ practices and recommend change if any shortcoming is found to streamline the approval process.

## NIST 800-53, Rev 5 Controls

- IHS conducts assessments on a 3-year cycle.
- Each year, IHS assesses one third of the controls along with any additional volatile controls.
- NIST SP 800-53, <u>Revision 5</u> provides a catalog of security controls grouped in control families. It also defines hundreds of control enhancements.
  - High baseline = 170 controls;
  - *Moderate baseline = 159 controls;*
  - Low baseline = 115 controls

ID	Control Family	ID	Control Family
AC	Access Control	PE	Physical and Environmental Protection
AT	Awareness and Training	PL	Planning
AU	Audit and Accountability	PM	Program Management
CA	Security Assessment and Authorization	PS	Personnel Security
СМ	Configuration Management	*PT(R5)	Personally Identifiable Information Proces and Transparency
СР	Contingency Planning	RA	Risk Assessment
IA	Identification and Authentication	SA	System and Services Acquisition
IR	Incident Response	SC	System and Communications Protection
MA	Maintenance	SI	System and Information Integrity
MP	Media Protection	*SR(R5)	Supply Chain Risk Management

The following documents needs to be provided before a System' Security Assessment in conducted, in order for the R&C' Security Control Assessor (SCA) to perform the ATO assessment.

Pre-Assessment Documents							
Document Name/Type	Stakeholders						
Cloud/FedRAMP (if applicable) – <b>Rev 5</b>	System Owner (SO), Information System Security Officer (ISSO), Chief Information Security Officer (CISO)						
Privacy Impact Analysis (PIA)	SO, PO						
Interconnection Security Agreement (ISA)	SO, ISSO, Interconnected System SO						
System Security Plan (SSP) – Rev 5	SO, ISSO						
Information System Contingency Plan (ISCP)	SO, ISSO, Disaster Recovery & Contingency Planning (DRCP)						
Configuration Management Plan (CMP)	SO, ISSO, DRCP						
Incident Response Plan (IRP)	SO, ISSO, DRCP						

# HEALTH CHINICH

## Follow The "What/Who"?

The following documents are collected after a System Security Assessment. These documents comprise the ATO package.

Post-Assessment	Documents
Document Name/Type	Stakeholders
Security Assessment Plan (SAP)	SO, ISSO, SCA
Security Testing and Evaluation (ST&E)	SO, ISSO, SCA
Security Assessment Report (SAR)	SO, ISSO, CISO, SCA
Plan of Action and Milestones (POA&M)	SO, ISSO, CISO, Audit Response & Coordination (ARC)
Authorization to Operate (ATO) Memo	AO, CISO, SO, ISSO, SCA

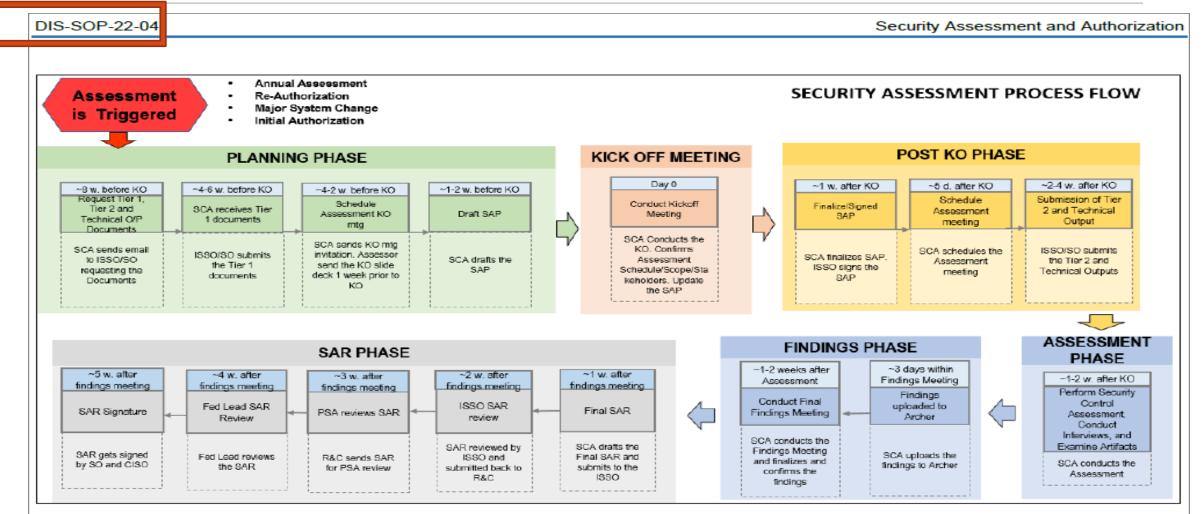

Figure 1: SA&A Process Flow

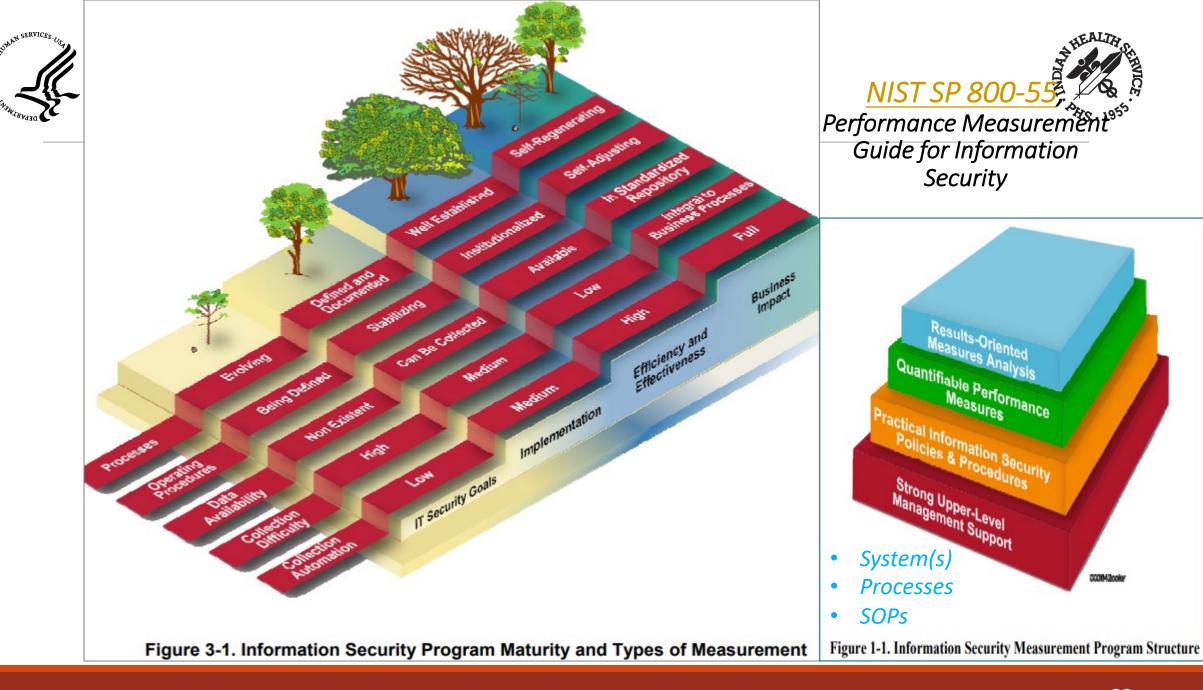

NIST SP 800-53A Rev. 5

ASSESSING SECURITY AND PRIVACY CONTROLS IN INFORMATION SYSTEMS AND ORGANIZATIONS

Figure 8 summarizes the security and privacy control assessment process, including the activities carried out before, during, and after the assessment.

	Pre-Assessm	ent	Assessment	Post-Assessment
	Prepare for Security and Privacy Control Assessments	Develop Security and Privacy Assessment Plans	Conduct Security and Privacy Control Assessments	Analyze Assessment Report Results
Organization	<ul> <li>Implement controls</li> <li>Notify key organizational officials of impending assessment</li> <li>Establish communications channels among stakeholders</li> <li>Identify and allocate resources assemble assessment team</li> <li>Establish scope and key milestones</li> <li>Assemble artifacts for assessment</li> </ul>	<ul> <li>Ensure assessment plan is appropriately tailored</li> <li>Involve senior leadership</li> <li>Balance schedule, performance, and cost</li> <li>Approve assessment plan</li> </ul>		<ul> <li>Review assessor findings and assess the risk of weaknesses and deficiencies</li> <li>Determine appropriate response actions</li> <li>Develop/update Plans of Action and Milestones</li> <li>Update Security and Privacy Plans (and Risk Assessment)</li> </ul>
Assessor / Assessment Team	<ul> <li>Establish organizational points of contact</li> <li>Understand organization's mission, functions, and business processes</li> <li>Understand system structure/architecture</li> <li>Understand selected controls for assessment and relevant NIST standards and guidelines</li> </ul>	<ul> <li>Plan(s)</li> <li>Develop assessment plan based on security and privacy plans</li> <li>Select assessment methods and objects</li> <li>Tailor procedures for organization and system</li> <li>Identify schedule and milestones</li> <li>Obtain artifacts for assessment</li> </ul>	<ul> <li>organizational annotations</li> <li>Implement assessment plan(s)</li> <li>Execute assessment procedures to achieve assessment objectives</li> <li>Produce assessment findings</li> <li>Recommend specific remediation actions</li> <li>Hoodece metar (procedure) and final assessment report(s)</li> </ul>	Authorization Package     Consult with organizational     officials regarding control     effectiveness

## We don't grow when things are easy, we grow when we face challenges.

### **The 4-W's:**

### Why - doing this objective/ project?

Framework Requirements?

## What - will be done & what resources are needed?

Implementation impacts and the equipment required to perform

## Who - is responsible for implementation?

Identify the personnel's duty in day to day operations

## When - is the estimated date of completion?

SOPs documented, is the objective actually implemented, if not, by when?

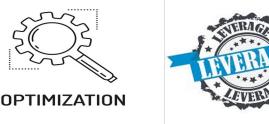

### **Parkinson's Law**

If you allow the task to take any amount of your time, then the work will expand proportionally! Parkinson's law says: "Work expands so as to fill the time available for its completion". So! The more time you allow for your task, the longer it will take to complete it.

FIGURE 8: SECURITY AND PRIVACY CONTROL ASSESSMENT PROCESS OVERVIEW

## Small Steps?

Security is often a combination of multiple small steps and ongoing efforts to protect systems, data, and people.

By breaking down security measures into manageable tasks, we can build a robust security posture and reduce the risk of large-scale breaches or compromises.

Rather than attempting to implement security solutions all at once, it's usually more effective to take small, incremental steps to improve security. This approach allows for careful testing, evaluation, and adjustment along the way, reducing the risk of overlooking critical vulnerabilities or causing significant disruptions.

#### Here are few examples to illustrate this concept :

- Regular Updates and Patching: Keeping software, applications, and systems up to date with the latest security patches is crucial. By
  consistently applying small updates, you can address known vulnerabilities and protect against emerging threats. Neglecting these small steps
  can expose systems to significant security risks.
- Employee Training: Security awareness and training programs should focus on small, actionable steps that employees can take to enhance security. This includes practices such as using strong passwords, recognizing phishing attempts, being cautious with email attachments, and reporting suspicious activities. Breaking down security practices into manageable steps increases the likelihood of adoption and compliance.
- Monitoring and Response: Effective security often involves constant monitoring and prompt response to security events. By breaking down the detection and response process into smaller steps, security teams can identify and address potential threats in a **timely manner**, preventing or minimizing damage.
- Network Segmentation: Dividing a network into smaller, isolated segments can enhance security by limiting the impact of a potential breach. If an attacker gains access to one segment, their lateral movement within the network can be restricted, reducing the potential damage they can cause.
- Secure Development Practices: In the realm of software development, following secure coding practices and conducting regular code reviews can help identify and remedy potential security vulnerabilities early on. By focusing on small, manageable portions of code, developers can identify and fix security issues more effectively.

# NIST 800-53, Rev 5 - Control SA-2?

#### SA-2: Allocation of Resources

N SERVICES

Control Family:	System and	Services Acquisition
CSF v1.1 References:	ID.GV-4	
PF v1.0 References:	GV.PO-P2	
Baselines:	Low	SA-2
	Moderate	SA-2
	High	SA-2
	Privacy	SA-2
Previous Version:		al Publication 800-53 Revision 4: ation Of Resources

#### **Control Statement**

- a. Determine the high-level information security and privacy requirements for the system or system service in mission and business process planning;
- b. Determine, document, and allocate the resources required to protect the system or system service as part of the organizational capital planning and investment control process; and
- c. Establish a discrete line item for information security and privacy in organizational programming and budgeting documentation.

#### Supplemental Guidance

Resource allocation for information security and privacy includes funding for system and services acquisition, sustainment, and supply chain-related risks throughout the system development life cycle.

#### **Related Controls**

#### NIST Special Publication 800-53 Revision 5

- PL-7: Concept of Operations
- PM-3: Information Security and Privacy Resources
- PM-11: Mission and Business Process Definition
- SA-9: External System Services
- SR-3: Supply Chain Controls and Processes
- <u>SR-5: Acquisition Strategies, Tools, and Methods</u>

### **SA-2: Allocation of Resources** Control Statement:

- a. Determine the high-level information security and privacy requirements for the system or system service in mission and business process planning;
- b. Determine, document, and allocate the resources required to protect the system or system service as part of the organizational capital planning and investment control process; and
- c. Establish a discrete line item for information security and privacy in organizational programming and budgeting documentation.

# Training Aids/ NIST Reference(s)

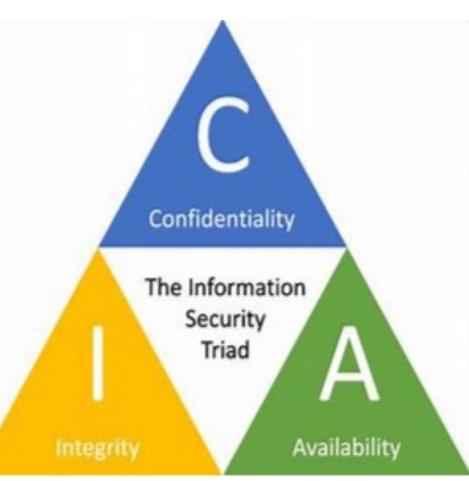

# IHS' Mission/Vision/Goals!

- Our Mission: to raise the physical, mental, social, and spiritual health of American Indians and Alaska Natives to the highest level
- Our Vision: healthy communities and quality health care systems through strong partnerships and culturally responsive practices

## • Strategic goals:

- to ensure that comprehensive, culturally appropriate personal and public health *services* are *available* and *accessible* to American Indian and Alaska Native people;
- to promote excellence and quality through innovation of the Indian health system into an optimally performing organization; and
- to strengthen IHS program management and operations.

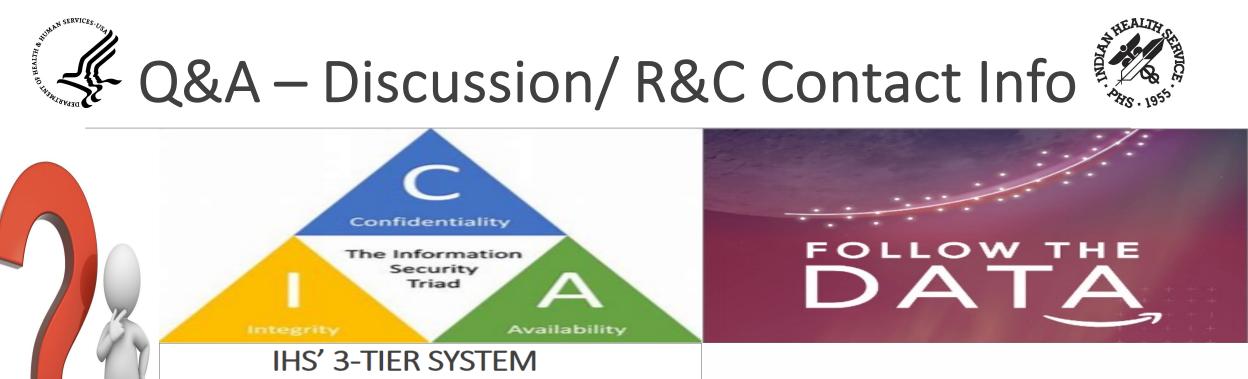

## IHS/ NIST Acronyms & Abbreviations

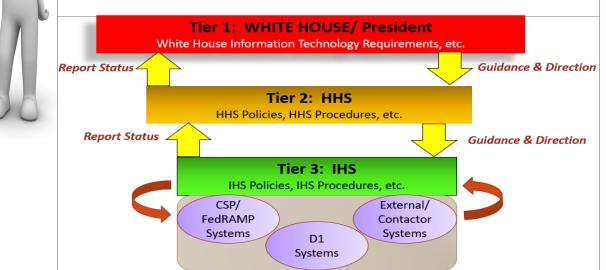

Glossary | https://csrc.nist.gov/glossary

Acronym	Definition
AO	Authorizing Official
ATO	Authorization to Operate
CIA	Confidentiality, Integrity, Availability
CISO	Chief Information Security Officer
СМР	Change Management Plan
CSP	Cloud Service Provider
DRCP	Disaster Recovery and Contingency Planning
FedRAMP	Federal Risk and Authorization Management Program
FIPS	Federal Information Processing Standards
IRP	Incident Response Plan
ISA	Interconnection Security Agreement
ISCP	Information System Contingency Plan
ISSO	Information System Security Officer

Acronym	Definition
NIST	National Institute of Standards and Technology
ΡΙΑ	Privacy Impact Assessment
POA&M	Plan of Action and Milestones
RMF	Risk Management Framework
SAP	Security Assessment Plan
SAR	Security Assessment Report
SCA	Security Control Assessor
SO	System Owner
SP	Special Publication
SSP	System Security Plan
ST&E	Security Testing and Evaluation
